

History of DWT, LLC Business Entity and Main Activities

DW Tower LLC (DWT) is a FCC licensed wireless service provider. DWT microwave systems provide backhaul interconnect services for the FCC licensed wireless carriers and broadband service providers. A wireless service provider is an entity that provides FCC licensed and related technologies used for mobile communications using a combination of radio and telephone switching technology, and providing public switched network services to fixed and mobile users within a defined geographic area”

DWT is also a wireless communications tower developer referred to as a **neutral infrastructure developer** by the wireless industry. A “neutral infrastructure developer” (NID) is an entity that develops communication towers or structures for the shared use by multiple wireless services providers who lease space on the tower from the developer

DWT has over 16 years’ experience developing, owning, and managing microwave systems and colocation wireless facilities throughout the west. DWT specializes in development and management of tower facilities and FCC licensed microwave systems on environmentally sensitive federal lands including U.S. Forest Service, Bureau of Land Management, and National Park Service.

Advantages for the wireless industry and federal and local land management agencies that DWT provides include the following:

- DWT being a NID has incentive to treat all wireless service providers equally.
- DWT operates and manages FCC licensed common microwave systems for wireless providers. The DWT common system reduces the need for multiple dishes reducing visual impacts and better allocates and manages limited bandwidth and frequencies.
- DWT has proven to be efficient in operating multi-user towers.
- DWT constructs towers capable of supporting a greater amount of equipment, thereby reducing environmental and visual impacts and the need for additional towers in the future.

- DWT works with all wireless service providers and other site users equally and fairly. Some wireless service providers will not work with other wireless service providers because of competition.
- Because DWT provides space for all carriers equally and fairly, the public is better served.
- DWT can handle interference and other inter-wireless service complaints better because they are not competing with other wireless carrier providers.

DWT has a unique and highly experienced development and operational team. DW Tower LLC is led by Dale Wilson, owner and founding member. Dale has enjoyed a long career in the telecommunication industry. He started his career in 1996 as a construction supervisor for T-Mobile. His responsibilities were to manage the construction of all of the telecommunication sites throughout Utah. After a few years with T-Mobile, Dale began to work for a telecommunication contractor who built towers and other communication sites for Verizon, T-Mobile, AT&T and Sprint. With all the necessary knowledge, relationships and strong reputation for getting the job done, Dale started his own telecommunication construction company in 1999. The name of the company was DW Tower, Inc. DW Tower, Inc. completed many projects for Verizon, T-Mobile, AT&T and Sprint for many years. With DW Tower running smoothly Dale started a new company in 2001 with the clear focus to own and operate towers. That company is DW Tower LLC. DW Tower has become the “go to” company for the wireless carriers when they have development needs in challenging locations. DW Tower enjoys a long standing relationship with the wireless carriers and federal land management agencies and strong reputation for getting the job done.

DW Tower LLC (DWT) has offices in Arizona, New Mexico, and California. The DWT management team consists of highly dedicated key individuals who lead the company to a strong presence in each location

DWT has been a member of NATE (National Association of Tower Erectors) since 1999, and have been committed to safety training and education from the onset. As a 2004 Excellence in Business Award winner for safety, safety remains a key component today from simple topics like wearing a hard hat on site to advanced training in CPR, first aid, driver’s safety courses, tower rescue, and many others. We continually strive to educate our employees and by careful planning and close attention to safety, we have maintained an EMR that is well below the industry standard.
